**Reasons for Allowance**

The following is an examiner's statement of reasons for allowance:

The person of ordinary skill in the art at the time the invention was made would have understood the claimed "computer-readable medium" to be well known as a physical material upon which the claimed "computer-executable instructions" are stored and able to be read by a computer. The well-established nature of such a medium in the art is evidenced by the "IEEE 100 The Authoritative Dictionary of IEEE Standards and Terms, Seventh Edition" which defines:

**machine-readable medium:** A data medium that is machine-readable.

**machine-readable:** Pertaining to data in a form that can be automatically input to a computer, for example, data encoded on a diskette; Pertaining to a medium that can record information and convey it to a machine or sensing device.

**media:** Material on which information can be stored or transported; Any readable or writable data storage area.

**medium:** The material, or configuration thereof, on which data are recorded; for example, paper tape, cards, magnetic tape; machine-readable medium; data medium.

**data medium:** A material in or on which data are or may be represented; data carrier; prerecorded data medium; medium.

**data carrier:** Material that serves as a data medium or to which a data medium is applied that facilitates the transport of data; for example, a punch card, a disk, or a plastic card with a magnetic surface that serves as the data medium.

Support for such a medium is found in the instant specification at, i.e. page 3 lines 4-13, which describes:

"A representative hardware environment is depicted in Figure 1, which illustrates a typical hardware configuration of a workstation in accordance with a preferred embodiment having a central processing unit 110, such as a microprocessor, and a number of other units interconnected via a system bus 112.

The workstation shown in Figure 1 includes a **Random Access Memory (RAM) 114**, **Read Only Memory (ROM) 116**, an I/O adapter 118 for connecting peripheral devices such as **disk storage units 120** to the bus 112, a user interface adapter 122 for connecting a keyboard 124, a mouse 126, a speaker 128, a microphone 132, and/or other user interface devices such as a touch screen (not shown) to the bus 112, a communication adapter 134 for connecting the workstation to a communication network (e.g., a data processing network) and a display adapter 136 for connecting the bus 112 to a display device 138" [emphasis added].

Claims 1-18 are considered allowable since when reading the claims in light of the specification, as per MPEP §2111.01, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims including: "a transformation component providing services for manipulating the state of the simulation, wherein the transformation component performs at least one calculation on the domain and provides a result back to the domain for further analysis by the profiling component" (supported at e.g., page 10 lines 23-38), as specified in claims 1 and 10.

The Examiner was persuaded by the arguments filed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
